Title: Christian Golfers Association

Reason:

- The website already exists. My dad has been complaining about how it's not user-friendly. I have just now looked at it. It is disgusting in my opinion.

Description:

- The website I to make it easier for members and potential members to have a single place to see updates for golfing tournaments. It is a non-profit organization. They need a user-friendly interface. They would also benefit from having it be easily usable on their phones. For this project, I will also be going out to take pictures and receive images that they have used (with permission). I believe in what they are doing because it's more than people just going out to golf. It is a community of people, and they would all benefit from a more friendly website. If I can make the website easier to use I can then use it in my portfolio. It is also in a .aspx file at this moment. It makes sense why links work once in awhile.

Page Names:

- I will be starting small of course because it will need more than 5 pages in order to be completed.
1. Home
2. Who are we?
3. Pledge
4. Donate
5. Contact CGA

Data Storage

- Basic Information for member identification: Member Names, numbers, addresses, passwords, emails(of course anyone can view it, but this allows for a member count when a member has an account)
- Information that will regularly change: donation amounts (on donations page)
- Displayed Information: number of members, President, Vice President (how to contact)
- Purchasable items: books they have (image of book, price, link to purchase book)
